Enhance your vessels' efficiency with the next generation in antifouling technology.

Ever since the 1920s, when Jotun launched its first antifouling coating, Jotun has been at the forefront of antifouling technology. Today, Jotun's range of next generation Hydractive® Technology products delivers antifouling that ensures the levels of performance you need, when you need it.

This antifouling technology incorporates Hydractive® particles, which effectively slow down water uptake, allowing biocides to release at a slower rate. The result is greater longevity of antifouling, giving you a cleaner hull for longer, and a more cost-effective, efficient operation.

With Jotun, you have almost 100 years of antifouling expertise brought into force. **SeaForce.**

Hydractive® Technology from Jotun. Giving you a cleaner hull, for longer.
